

POLYDURA

DURABLE OUTDOOR SIGN SOLUTION

Cole Graphic Solutions specializes in durable sign solutions. PolyDura is one substrate that we have found to be very successfully holding up to demanding conditions long term. This is just one of many choices, let us customize a solution to meet your exact needs.

WHAT IS POLYDURA?

PolyDura is a proprietary formulation of polyethylene, specially treated for long-term outdoor signage. It contains post-consumer recycled material and is resistant to dents, chips and cracks. PolyDura is even resilient to bullet holes! As a more economical and environmentally responsible alternative to aluminum, PolyDura doesn't sacrifice durability or quality standards.

We print your image directly onto the PolyDura rather than applying a decal or vinyl overlay. Since Polydura doesn't expand or contract with temperature changes like metals do, you won't have the cracking and peeling that is common with aluminum. Because it's a plastic, it won't oxidize and corrode like aluminum. With Polydura, you end up with signage that can withstand harsh environmental conditions.

BENEFITS OF USING POLYDURA:

- Available in a variety of thicknesses and colors
- Die cut to your custom shape
- Fade resistant for up to 5 years
- Chip and crack resistant
- Ideal for long term outdoor signage & tags
- Works with heat pen for 3D data recording
